

Pond Fountain Selection Guide

Drs. Foster & Smith Educational Staff

From simple bell to dazzling blossom, the right fountain display can add a beautiful focal point while providing added benefits for your pond. Surface agitation helps raise oxygen levels, lower ammonia levels and cool your pond. Higher oxygen levels decrease algae growth and help your fish breathe easier. Finding the ideal fountain is easy: 1) pick a pattern that is appealing to you, 2) choose what type of system best fits your needs; a pump with fountainhead, a pump with filtration and fountainhead, floating fountain, or just add a fountainhead to a pump you already have.

Product	Pond Size	# of Fountain Heads	Fountain Type	Includes Filter	Additional Information
