

Barley Straw Benefits

Drs. Foster & Smith Educational Staff

NATURAL water conditioning

After days of heavy rain, my pond water was murky and I couldn't see my fish anymore. I had to do something but didn't want to use any chemicals. My niece suggested using [barley straw](#) as a natural alternative.

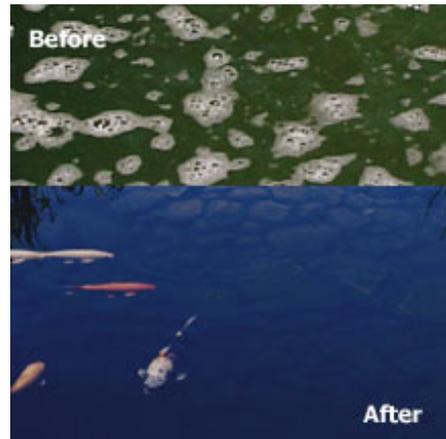

She lent me her copy of your [catalog](#) and I ordered the [Barley Straw Pellets+](#) and I can't believe how well it's working! The pellets are real easy to use and it's been months since I put it in my pond and it's still working.

I didn't have to buy additional products or keep using more of the Barley Straw Pellets+. It's all natural and a time-released product so I'm not afraid of over-dosing. I applied the product following the instructions and I'm still seeing results, even those I didn't expect!

I bought it to help with water clarity, but it does more than that. The organic peat really helps to soften and condition the water AND it also helps buffer pH. My water quality has never been better and my fish seem happier too! I feel good knowing that something 100% natural is taking such great care of my pond.

Thank you for offering such wonderful products.

– Wendy S., Seattle, WA

We recommend:

- [Microbe-Lift](#) creates a balanced pond environment and its natural and safe additives reduce buildup of organic and inorganic particles.
- [Healthy Ponds Natural Pond Cleaning System](#) All natural, time released water treatment of bacteria and enzymes breaks down algae.
- [Barley Straw Pellets+](#) Less mess, and costs less than straw bales. Clarifies ponds without harmful chemicals.
