

# Lifestage Select® Multivitamins: For All Stages of a Dog's Life

Drs. Foster & Smith Educational Staff

## Lifestage Select MULTIVITAMINS

About a year ago, our veterinarians asked us to improve our multi-vitamin line: they had studied all the latest veterinary journals and found new evidence that certain ingredients were needed daily for different life stages. That is how our brand new line of multivitamins was born. We formulated each product specifically for the needs of each life stage and even formulated one especially for small and toy dog breeds.

## for all stages of life

### 1 Puppy

Growth, development, and high energy levels are the hallmarks of puppyhood. Our Puppy formula contains all your juvenile dog needs to grow up correctly.

### 2 Adult

This supplement is the foundation for the whole line. It's formulated with 31 nutrients like Omega-3 fatty acids, multiple antioxidants, and ultra trace minerals - everything your adult dog needs to maintain his healthy lifestyle.

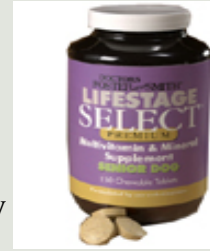

### 3 Small Dog Vitamin

Special needs of smaller breeds include a high incidence of dental problems. This formulation contains higher concentrations of certain vitamins, minerals, and amino acids that are proven to help dogs with oral conditions.

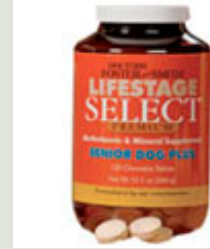

**4** Senior When your dog starts to slow down and go through other changes aging brings, he needs extra nutrients. This formulation contains more antioxidants, Vitamin E, and other ingredients for all of your senior's changing body systems.

**5** Senior Plus Seniors with mild arthritis need additional nutrients to help with this condition. This formula contains an ingredient that helps rebuild cartilage and one that helps with arthritic discomfort.

### Why these dog multivitamins are better

We use natural sources for nutrients whenever possible and premium ingredients. All formulas were created using the latest research on what your dog needs, no matter what life stage, size, or body condition. You'll find, as we did, that these are absolutely the best canine vitamins available. And doesn't your dog deserve the best?
