

Bird Seed Mixes: About Our Brand

Drs. Foster & Smith Educational Staff

Premium SEEDS - they're worth it!

Our foods are made with **choice combinations** of bird-favorite nuts including sunflower kernels, shelled peanuts, and more

Birdwatching is an entertaining and rewarding hobby. Many birders faithfully fill their feeders in hopes of catching a glimpse of brightly colored orioles, grosbeaks, cardinals, and other backyard favorites. Other birders feed wild birds to ensure that the birds have a reliable food source throughout the year. No matter what your reasons are for feeding wild birds, the amount of birds at your feeder is greatly based on the food you place inside.

You can lure wild birds to your yard when you fill your feeders with quality seed blends that contain bird-favorite ingredients. Our [Premium Specialty Wild Bird Seed Blends](#) offer your backyard visitors unparalleled nutrition and health. Here are just a few reasons birds choose feeders filled with our premium seeds over feeders filled with standard seeds:

Superior ingredients, superior health: Our Premium Seeds are the best you can buy. Our foods are made with choice combinations of bird-favorite nuts including sunflower kernels, shelled peanuts, pistachios, almonds, pecans, and

walnuts. We also include generous chunks of real fruits like dried cranberries, dried cherries, dried blueberries, raisins, and more. We even fortify our seed with vitamins and minerals to ensure ultimate wild bird health.

Low-waste, no-waste: Our premium seed blends are low-waste or no-waste formulas to reduce feeder maintenance. When you use our seed, you will find that you clean up around your feeder less often and you don't have sprouts forming around feeders. Moreover, since you're not paying for uneaten hulls, you're saving money.

Fresh and clean: Our seed is triple cleaned to remove as much dirt, dust, and debris as possible to reduce the threat of seed contamination. Then, the seed is packaged fresh.

Field tested: All our seed is field tested and approved. The birdseed mixes that carry the Drs. Foster and Smith name are created with strict standards and carry our personal stamp of approval.

Do you have enough **Doctors Foster and Smith Seed** for your feeder? Compare [seed blends](#) to ensure your feeders stay filled.
