SCIENCE BASED SOLUTIONS

...For Healthy, Thriving Aquariums

Situation	One & Only	Aqua Cleanse	First Defense	Clear-UP	Re-FRESH	Eco-Balance	Waste-Away
Detoxify Tapwater							
Remove Chlorine							
Remove Chloramines							
High Ammonia							
High Nitrite							
New Tank Syndrome							
When Adding Fish							
Cloudy Water							
After Changing Water							
Have Dirty Surfaces							
Have Cyanobacteria							
Have Brown Diatoms							
Have Algae Problems							
Have Dirty Gravel							
Fish Are Lethargic							
When Treating Fish							
After Fragging Corals							
Coral RTD (rapid tissue necrosis)							
Have Waste Build-Up							
Have Smelly Water							
Regular Maintenance							

Primary Product Choice   Second of Follow-up Product Choice  

Dr Tim's Aquatics products are based on real science that bring real solutions and real results to fish keeping. Below is a brief description of our products that are available for freshwater, saltwater and reef aquaria. Product sizes range from 2 to 128 ounces.

Our flagship product is the **One and Only Live Nitrifying Bacteria**. Used by professionals such as the London Aquarium, SeaLife Aquarium in Carlsbad, CA and Phoenix, AZ and Shark Reef in Las Vegas as well as the California Science Center in Los Angeles and many other public aquaria this product has no rival. One and Only is different than other bacteria products

as our bacteria are grown on a substrate instead of free swimming which means the bacteria stay active longer in the bottle and work faster once poured into the aquarium. It is shelf stable (does not need to be refrigerated) and clearly date labeled so you know exactly what you are getting - it is the only bacteria grown by Dr Tim.

**First Defense** is a fish stress relief agent with immunostimulants and vitamins to support the immune system and help fish cope with the stress of transport, netting, bagging etc. Great to add after a water change, to your bagging solution and when doing a freshwater dip of marine fish. It adds a buffer, has a slime coat replacement, and gets rid of chlorine and chloramines while detoxifying heavy metals.

**Re-FRESH** is a mixture of beneficial microorganisms that work to keep the aquarium water and surfaces clean and looking fresh. Re-FRESH also reduces organics and gets rid of aquarium scum and cyanobacteria. Re-FRESH fights algae and slime, naturally, while being non-harmful to plants.

**Eco-Balance** uses friendly probiotic bacteria to restore and maintain a balanced aquarium while reducing the numbers of bad bacteria - resulting in a clean, healthy aquarium environment. Eco-Balance for marine and reef tanks attacks various species of *Vibrio* that are pathogenic to fish and corals while the freshwater version attacks common disease causing bacteria of freshwater fish.

**Waste-Away** is a concentration of beneficial bacteria that dissolve the sludge and other organics (dissolved and particulate) in an aquarium unclogging gravel & coral beds, keeping filter pads freely flowing longer resulting better water flow, more oxygen and a healthier aquarium. Waste-Away gets rid of the source of nutrients (nitrate and phosphate) that cause cyanobacteria and algae.

**Clear-UP** is a 100% natural water clarifier. It will clear up cloudy white aquarium water without using the toxic chemicals that are in the most common water clarifying products. It does not contain alum (which contains aluminum) or polyacrylamide (which is toxic when overdosed).

**AquaCleanse** a tapwater detoxifier that permanently removes ammonia, chlorine and chloramines but does not have a bad smell and will not drastically drop the pH.
