

## Dewormer Comparison Chart

*Drs. Foster & Smith Educational Staff*

As a general rule you may not see the worms that infect your dog or puppy. Since most puppies are born with worms, it's very important that you get them on a deworming regime as soon as age permits. For adult dogs a fecal exam by a veterinarian is the quickest and most accurate way to tell if your faithful friend has worms of any kind.

The following is a list of wormers we have available, their ingredients, minimum age, weight requirements, and type of worms they treat.

	Ingredients	Large Round-worms	Hook-worms	Tape-worms	Whip-worms	Heart-worms	Need RX	Safe During Pregnancy	Min. Age/Weight
<a href="#"><u>PRO-Wormer-2®</u></a>	Pyrantel pamoate	✓	✓						2 wks
